Taken together, these efforts illustrate the Biden Administration's multipronged approach to incentivizing solar energy generation and other renewable energy sources in the United States.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

In that roadmap, we set a target for solar energy to reach 20% of generation by 2030 as the U.S. transforms the electric grid and builds a robust clean energy economy.

While solar deployment and electric vehicle sales broke records in 2023 and 2024 in the U.S., significant obstacles to building a clean energy system remain.

Under the solar lease model, customers sign a contract with a solar developer and agree to pay a specified rate over the life of the lease, which typically covers 10-20 years.

Decarbonisation plans across the globe require zero-carbon energy sources to be widely deployed by 2050 or 2060. Solar energy is the most widely available energy resource on Earth, and ...

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

Since solar PV and onshore wind are the cheapest technology options to add new power generation in China, facilities were receiving 15- to 20-year contracts at provincial coal benchmark prices and very ...

The graph highlights the rapid expansion of solar power globally, reflecting the increasing adoption of solar energy technologies and supportive policies in these countries.

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big

20-year policy for solar power generation

Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...
