Is an alternator a good choice for a homemade wind system?

The reason an alternator will not be the ideal choice for a homemade wind system is due to the fact that perhaps many do not know, to be needed a lot of strength to rotate the shaft of the alternator when the latter, after reaching a certain number of rpm, starts production of energy.

Can a Delco alternator be used for a small wind generator?

A Delco alternator can be modified to make it suitable for a small wind generator. Replacing the stock stator wiring with a stator that has more turns of smaller gauge wire and replacing the standard magnets with high powered neodymium magnets are some of the modifications that can be made to increase the power output.
