-----

First, we analyse the policy text according to the policy content refined into five parts: (1) the specific degree of electricity price fluctuation up and down; (2) the specific times ...

Using energy data from the CGSS 2015, this study empirically analyzes the influencing factors of the household electricity consumption of Chinese residents.

China has introduced a new electricity pricing model aimed at achieving fairer rates and more efficient distribution in the world's largest power grid. The changes involve treating all ...

The reform of new energy on-grid electricity prices marks a significant milestone, with approximately 80% of China's installed capacity and 80% of its power generation now subject to ...

a two-part electricity pricing system from January 1, 2024, consisting of a capacity and an electricity price for coal-fired power. The electricity price is established by the market while the capacity price ...

The tiered electricity pricing (TEP) policy in China was implemented for 10 years. With the rapid economic growth and changing in residential consumption behavior, whether the initial design ...

Despite the recent downward trend in energy prices due to gas and electricity price caps, global electricity costs remained well above pre-pandemic levels by the end of 2024.

Abstract. This paper reviews the introduction, implementation, and adjustment of benchmark on-grid power tariffs in China as well as discusses the impact from the on-going power market reforms. The ...

These retail prices were collected in June 2025 and include the cost of power, distribution and transmission, and all taxes and fees. Compare China with 150 other countries.

The main factors influencing the residential tiered electricity pricing design are discussed in this paper from the perspectives of users, the electric power enterprise and government regulation.
