te the energy performance of a solar-driven air-conditioning system utilizing absorption technology under climate in Baghdad, Iraq. The solar fraction and the thermal performance of the solar air-conditioning ...

Aiming at usage of renewable energy sources, the proposed system uses solar collectors as auxiliary solar thermal compressors and integrate them with air conditioning systems.

According to Iraqi Meteorological Organization, the air temperature recordings in 2018 have exceeded 50°C. Hence, adopting renewable energy technologies such as solar cooling is one of the good ...

Summary: As temperatures in Baghdad soar above 50°C, solar-powered air conditioners are emerging as cost-effective and eco-friendly solutions. This article explores the technology behind solar AC ...

Solar air conditioners are transforming Baghdad's approach to sustainable cooling. With rapid technological advances and favorable ROI timelines, these systems offer both economic and ...

This article presented a detailed analysis of the performance of a solar driven-absorption cooling system as alternative technology for air conditioning of a house, under hot and dry climate in ...

Air conditioners in Iraq consume more than half of the average electricity production. Therefore, saving energy leads to ensuring the reliability of electricity and reduces the consumption of fuel and gases ...

Solar air conditioning offers a sustainable alternative, combining Iraq's abundant sunshine with modern cooling technology. "A typical Baghdad household could save 1.8 million IQD (\$1,200) annually by ...

This study investigates experimentally the effect of reducing energy consumption in air conditioning systems on system performance by integrating solar thermal energy into the system and ...
