Electric Double Layer Capacitors (EDLC), Supercapacitors are in stock at DigiKey. Order Now! Capacitors ship same day.

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today.

These electrochemical type capacitors are small in size and can offer capacitance in tens, hundreds, or even thousands of Farad. They cannot only store a large amount of charge, but they ...

Electric double layer capacitors (EDLCs), also known as super-capacitors, are energy storage devices primarily used to support power supplies in managing surge power demands, particularly in electric ...

Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors. They deliver rapid, reliable bursts of power for hundreds of ...

Unlike ordinary capacitors, supercapacitors do not use a conventional solid dielectric, but rather, they use electrostatic double-layer capacitance and electrochemical pseudocapacitance, [2] both of which ...

Electric double layer capacitors are suitable for a wide range of applications, including memory backup in electronic devices, battery load leveling in mobile devices, energy harvesting, energy regeneration ...

This article highlights HY-LINE Power Components Super- and Ultracapacitors built using double layer technology used as starting aids for power generators.

Feature high capacitance value (Farad) for energy storage, voltage hold-up and battery back-up applications. Double layer capacitors bridge the gap (see graph below) between conventional ...
