Within the research we will test our electrolytes with other components of the cell, since we are responsible also for testing additives that facilitate the battery work. The Warsaw University of ...

It was established as a result of collaboration between leading European centres focused on the development of cutting-edge battery technologies. The project is coordinated by the SINTEF ...

Batteries consist of three basic components: two electrodes (cathode and anode) and the electrolyte connecting them. To improve the properties of the entire battery, scientists from around ...

The ASTRABAT project, which involves scientists from the Warsaw University of Technology (PW), has developed a design for a new battery that is more thermally stable and safer. ...

This battery made of primary materials available in Poland (including carbon, sulfur and lead) has a potential for use in home energy storage devices, warehouses, in industry or in balancing ...

The intensive development of electromobility, including battery electric vehicles, motivates scientists including those from the Warsaw University of Technology to research the scope of the ...

How many times have you heard that Polish scientists create publications and receive patents that only a few specialists know of? A team from the Warsaw University of Technology ...

The 2019 Nobel Prize in Chemistry was awarded for the development of lithium-ion batteries. This contributed to increased interest in this subject and acceleration of research, including at the Warsaw ...

The 2019 Nobel Prize in Chemistry was awarded for the development of lithium-ion batteries. This contributed to increased interest in this subject and acceleration of research, including ...

Battery research and development warsaw

The consortium included prominent research centers and universities, as well as automotive companies specializing in batteries and energy. Warsaw University of Technology was ...
