In 2025, wind, solar, hydro and biomass generated more than 127 terawatt hours (TWh) of electricity in Great Britain, according to BBC analysis of provisional Neso data.

Long Duration Electricity Storage (LDES) facilities provide vital back-up for the renewable power system - working like giant batteries that store electricity created by wind and solar farms,...

Industrial Power Response develops energy storage systems for intensive applications. Its proprietary energy storage technology is designed for electrifying industrial equipment and the ...

This policy briefing explores the need for energy storage to underpin renewable energy generation in Great Britain. It assesses various energy storage technologies.

Whatever your energy storage needs are we can engineer the right solution. Give us a call to discover our flexible systems with low EPC costs and minimal OPEX for any situation.

Delivering comprehensive and accurate renewable energy data, insights and dashboards for the wind, marine, energy storage and green hydrogen sectors in the UK - and offshore wind ...

The energy capacity of new battery, wind, and solar projects that received approval climbed to 45GW this year, 96% higher than in 2024, according to data from Cornwall Insight.

As renewables like wind and solar become dominant sources of electricity, storing excess power and deploying it when demand is high is critical. From mountainous pumped hydro to cutting-edge ...

As a leading UK independent power producer, British Solar Renewables delivers integrated renewable energy technologies - from solar and storage to wind - to strengthen energy security, protect ...

British wind solar and energy storage units

Britain will only make effective use of its energy potential if grid-scale energy storage keeps pace with the expansion of new windfarms and other forms of intermittent renewable energy, ...
