ed a microgrid using wind and solar energy for three Cape Verdean communities. They found that the hybrid wind-solar microgrid had a lower life-cycle cost than either a pure diesel microgrid or a wind

Even though Cape Verde has high wind and solar energy resources, the conventional strategy for increasing access to electricity in isolated rural areas is by centralized microgrids with diesel generators.

The Cape Verde Microgrid Control System market is experiencing growth due to the increasing adoption of microgrids for enhancing energy reliability and resilience.
