What is EV charging and discharging management model?

Wang et al. established an effective and fast EV charging and discharging management model in the day-ahead stage. It optimizes EV charging and discharging in generalized energy storage (GES). Zheng et al. proposed a hybrid energy storage system (ESS) consisting of EVs and supercapacitors.

What is intelligent charging and discharging strategy?

Tang et al. proposed an intelligent charging and discharging strategy based on decision functions. It was applied to EVs in smart grids. The strategy can dynamically adjust the charging and discharging time and power of EVs based on factors such as electricity price, grid load, and the charging demand of EVs.

Do distributed battery energy storage systems reduce electrical supply costs?

This article focuses on the distributed battery energy storage systems (BESSs) and the power dispatch between the generators and distributed BESSs to supply electricity and reduce electrical supply costs. The cost analysis of electrical supply from the generators and BESSs is proposed.

How will EV charging and discharging scheduling affect power grids?
