-----

Europe risks becoming "an assembly plant" for Chinese battery manufacturers unless the continent puts in place regulations that ensure technology and skills transfer in return for state aid,...

Even before the factory began production, it secured orders from automotive giants like Volkswagen, BMW, and Volvo, reflecting strong backing from both industrial and financial capital.

The fact that China produces the majority of lithium iron phosphate active materials, with a share of more than 98 percent, means that Europe is directly dependent on this more cost-effective ...

Europe finds itself in a peculiar situation: Europe's unmatched manufacturing expertise is offset by a critical vulnerability--its heavy reliance on external raw materials.

Following this, the lithium battery maker filed for bankruptcy in late 2024 due to production and funding issues, leaving VW exposed. However, the carmaker still has its PowerCo ...

China's dominance in the area of batteries is overwhelming; the Middle Kingdom controls almost the entire value chain of lithium-ion batteries. However, a study also suggests how Europe ...

The restrictions China implemented include three core technologies linked to battery-cathode production for lithium iron phosphate (LFP) batteries, a popular type of lithium-ion battery ...

The move complicates European hopes of importing Chinese know-how to accelerate its own battery manufacturing ambitions. Three of the new restrictions cover the preparation of lithium ...

The results demonstrate that China, Europe, and the United States of America (USA) exhibit the most pronounced ownership across the supply chain, acquiring the largest foreign shares ...

Of the four raw materials analysed - lithium, nickel, cobalt and manganese - only manganese is an exception.  
The refinement of the raw materials and the construction of the actual ...
