Based on an extensive evaluation of various energy storage technologies, four (4) key solutions have been identified as the most suitable options for Sri Lanka which can be implemented over the next ...

Based on the identified challenges, this research project provides recommendations to address these challenges and enhance the energy management and EnMS in the transportation and ...

SAPS consist of three major components, a power source, a storage system, and a power distribution system. The following three configurations are commonly used SAPS in Sri Lanka.

Guidelines for optimising solar PV and battery storage systems to achieve financial and energy efficiency, ensuring a reliable and uninterrupted power supply while minimising reliance on the national grid.

We offer a simplified method of managing overall energy consumption even in remote sites with centralised control and alarms when exceeding threshold values and during malfunctions to reduce ...

Using solar PV to power mini-grids is an excellent way to bring electricity access to people who do not live near power transmission lines. The cost of manufacturing solar panels has plummeted ...

By partnering with global tier-one manufacturers, as well as selected local suppliers, we are able to offer high-quality and durable solar power solutions in Sri Lanka at the most affordable prices.

Next-generation thermal management systems maintain optimal operating temperatures with 40% less energy consumption, extending battery lifespan to 15+ years. Standardized plug-and-play designs ...
