Launched in 2021 under the leadership of the EDF Group, the EVVE (Environmental Valorization of Virtual Energy storage) project aims to deploy 800 vehicle-to-grid (V2G) charging ...

Explore the EU's comprehensive regulatory framework for sustainable EV charging infrastructure, including important mandates like AFIR, technical standards for interoperability, and ...

This ACEA Automotive Insights report examines the status of public charging infrastructure for light-duty ECVs across Europe 4, taking a snapshot of the situation at the end of 2023.

An analysis from McKinsey suggests that the European Union will need at least 3.4 million operational public charging points by 2030 to enable a complete switch to EVs.

It covers all EU-27 countries and various vehicle types with a focus on access to charging infrastructure and driving range for electric vehicles (passenger cars, light commercial vehicles ...

To go carbon neutral by 2050, Europe needs more electric vehicles on the road--and more EV charger installations. What will this build-out look like and what might it cost?

The European Commission is calling for 3.5 million charging points by 2030 to support the level of vehicle electrification necessary to ...

The European Commission is calling for 3.5 million charging points by 2030 to support the level of vehicle electrification necessary to reach the proposed 55% CO2 reduction for cars.

Installation of public charging points across the European Union is expected to increase as a result of the Alternative Fuels Infrastructure Regulation (AFIR), which mandates the installation of fast ...

# EU Energy Storage Electric Vehicle Charging Station

The aim is to make the recharging infrastructure user-friendly everywhere in the EU so that charging of battery-electric vehicles is possible flexibly and spontaneously.

The transition to electric vehicles is well underway in the European Union, but ensuring sufficient charging infrastructure remains a challenge.
