Summary Electricity Natural gas Oil Renewable energy Greenhouse gas emissions Nuclear energy Algeria primarily relies on fossil fuels for energy generation, with nearly 97% of its electricity capacity derived from these sources. The country has seen significant growth in its electricity capacity, which nearly doubled from 2011 to 2020, mainly due to the addition of more efficient natural gas-fired and combined-cycle gas turbine plants. However, Algeria is also aiming to increase its renewable energy capacity to 15 GW by 2035, starting with a solicitation for bids to install 1 GW of solar photovoltaic cap...

Natural gas was the predominant source of electricity generation, accounting for 99% of the total electricity production which amounted to 85,390 GWh. This significant dependence on natural gas is ...

Discover all statistics and data on Energy sector in Algeria now on statista !

In terms of electricity consumption per capita, the country is 132nd in the world; however, for the indicator of combination of electricity production-consumption, Algeria is 32nd in the ranked ...

Electricity In 2023, Algeria's electricity net consumption was about 86 gigawatthours (GWh), which is about a 61% increase from electricity net consumption a decade earlier. Algeria also ...

It represents all the energy required to supply end users in the country. Some of these energy sources are used directly while most are transformed into fuels or electricity for final consumption.
