As companies across the globe pursue decarbonization targets and the need for green power generation grows, 24/7 clean power purchase agreements (PPAs) are playing an increasingly ...

80 new hybrid plants (>1 MW) began operating across the United States in 2023, totaling nearly 7.9 GW of generating capacity and 3.6 GW/11.6 GWh of energy storage.

WASHINGTON, D.C. -- Companies across the United States are investing in record-levels of solar and energy storage to power their operations.

In 2026, a long tail of qualifying assets will likely sustain deal flow, but capital will increasingly pivot beyond credits toward fundamentals--favoring storage, hybrid platforms, and long-term ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

The review comprehensively examines hybrid renewable energy systems that combine solar and wind energy technologies, focusing on their current challenges, opportunities, and policy ...

Solar-plus-storage facilities represented more than 92% of proposed hybrid bulk power plants and 86% of known hybrid bulk generation capacity in the U.S. interconnection queue as of...

LZY mobile solar systems integrate foldable, high-efficiency panels into standard shipping containers to generate electricity through rapid deployment generating 20-200 kWp solar arrays, reducing reliance ...

Through comparison of the No Hybrids and With Hybrids versions of each scenario, we isolate the potential

Energy companies are making bulk purchases of hybrid photovoltaic and energy storage containers

impacts of hybridization on total PV deployment, PV's share of total generation, the role of ...

Hybrid energy solutions are emerging as the answer, combining renewable sources like solar and wind with traditional power generation and energy storage. This combination delivers ...
