Communication modules--the unsung heroes coordinating data flow between batteries, inverters, and grid interfaces--often become the weakest link in renewable energy setups.

Maisvch delivers advanced communication infrastructure for energy storage power stations, creating unified connectivity between critical operational components.

Our proposed solution is to utilise the anode and cathode connection within the cell for transmission of data, in essence connecting our device across the battery terminals in-situ of the cell.

In a BESS, each battery cell or module can be equipped with a CAN transceiver, enabling them to exchange information such as voltage, temperature, and state of charge (SOC).

Our battery management integrated circuits and reference designs help you accelerate development of battery energy storage systems, improving power density and efficiency while providing real-time ...

This reference design fits stackable high-voltage battery energy storage systems used in large scale utility solutions, industrial and commercial UPS as well as storage for domestic use.

The Nuvation BMSTM is an enterprise-grade battery management system with support for various external communication protocols like Modbus RTU, Modbus TCP, and CANBus.

Communication modules are essential for ESS to function cohesively. Whether in residential or industrial setups, they enable coordination among components and ensure seamless ...

Trust Molex for safe, compact and high-voltage battery connections for energy storage systems. Learn connector insights, see teardown visuals and get expert design tips here.

Energy storage battery communication module

The BCU needs to transmit the SOC, SOH, and rack status to the PCS and BSMU to operate the whole energy storage function. CAN, RS-485, and Ethernet is widely used in the communication interface.
