How much money will Europe spend on wind farms in 2024?

To illustrate the scale: in the first half of 2024, Europe made final investment decisions on EUR15.4 billion of new wind farms. And the EIB has raised its annual financing ceiling to a record EUR100 billion for 2025 to support energy security and industry, with a big chunk earmarked for wind manufacturing and projects.

Is wind energy a good investment in Europe?

Wind energy in Europe is not only an environmental imperative but also an increasingly sound financial investment. We've seen that the cost of wind energy systems can vary widely - from a €2,000 roof-mounted micro-turbine in the UK to multi-million-euro mega-turbines on a Spanish hillside or off the German coast.

Are wind turbines a good investment?

Wind turbines are expensive, often requiring a high initial capital outlay. However, over their 20-30 year lifespan, they generate electricity without fuel costs, potentially saving on energy bills or earning revenue from selling power.

How much does a 3 MW wind turbine cost?

Onshore wind turbines intended for wind farms typically cost roughly EUR1 to EUR1.5 million per megawatt (MW) of capacity. For instance, wind turbine manufacturer Vestas reported an average selling price of about EUR1.21 million per MW in 2024. That means a 3MW onshore turbine might be around EUR3.6 million just for the turbine equipment.

What are the current long-term solar and wind power prices? Our PPA Insights report shows prices for most European countries.

The average wind energy capture price in France was \*\*\*\*\* euros per megawatt hour in June 2024.

Platts has launched an "interactive explorer" tool that shows the capture price received by wind and solar power assets, using hourly production and monthly average price data for Spain, ...

Pairing solar with wind energy and investing in storage solutions will help balance supply and demand,

ensuring more stable electricity prices. Technological Advancements: The future of ...

This report analyses the cost of lithium-ion battery energy storage systems (BESS) within Europe's grid-scale energy storage segment, providing a 10-year price forecast by both system and ...

Wind energy in Europe: 2024 Statistics and the outlook for 2025-2030

In Europe Energy Storage Market, Over the next decade, the top 10 countries in Europe will add 73 GWh of energy storage, amounting to 90% of new deployments.

BloombergNEF (BNEF) is a strategic research provider covering global commodity markets and the disruptive technologies driving the transition to a low-carbon ...

Discover the true cost of wind energy systems in Europe and what financial returns you can expect. Learn about installation expenses, influencing factors, ROI, incentives, and financing ...

The average for the long-duration battery storage systems was 21.2 MWh, between three and five times more than the average energy capacity of short- and medium-duration battery storage systems. ...
