What does a flashing light mean on a generator?

The flashing light should encourage the owner to service the generator. Because the meaning behind the three flashes will vary depending on the model, you should check the controller. Modern generators have diagnostic tools that use codes to reveal the fault that has caused the generator to malfunction.

Why is my Generator blinking?

When the generator is ready to run, the green light should be steady. Blinking is a sign of utility power loss. Make sure your generator is getting the voltage it needs via the N1 and N2 connections. It should be noted that blinking is only a problem if it is persistent. From what the people at Norwall have seen,

What does a yellow LED on a Generac generator mean?

According to Generac, a yellow LED on one of their units acts as a reminder. It encourages the owner to service the generator. Sometimes, the generator expects you to inspect the battery. On other occasions, you have to change the oil and filter. However, the unit will continue to run.

How do I fix a red light on my Generac generator?

In some cases, you can clear the red light by fixing the fault that caused the red light to come on. If the red light has persisted, try resetting the generator. If you have a Generac unit, select 'OFF' on the Manual/Auto/Off control. Once you press 'Enter' and then 'Auto,' you will clear the fault code before restarting the generator.
