Overview Comparison with other batteries History Characteristics Electrochemistry Prismatic (industrial) vented-cell batteries Sealed (portable) cells Popularity Recently, nickel-metal hydride and lithium-ion batteries have become commercially available and cheaper, the former type now rivaling Ni-Cd batteries in cost. Where energy density is important, Ni-Cd batteries are now at a disadvantage compared with nickel-metal hydride and lithium-ion batteries. However, the Ni-Cd battery is still very useful in applications requiring very high discharge rates because it can endure such discharge with no damage or loss of capacity.
