75% of Spain's electricity was generated from low-carbon sources in 2025, above the EU average of 71%. Spain's largest source of clean electricity is solar (22%). Its share of wind and solar ...

As of 2023, Spain has achieved an installed solar power capacity of around 18 gigawatts, which accounts for approximately 25% of the country's electricity generation.

Spain's electricity mix includes 21% Wind, 20% Solar and 20% Gas. Low-carbon generation peaked in 2024.

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 ...

Photovoltaic solar energy broke production records in June in Spain, generating 5.997 GWh and accounting for 26% of the monthly electricity mix. Renewable energy reached a historic 54,1% share ...

Spain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries with the ...

In the Valencian Community, hydroelectric power generation increased by 26.1%, and solar photovoltaic by 3.0%, contributing to renewable energy generation making up 22.4% of the regional electricity ...

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at 24.9%. Renewable generation grew 10.3%, ...

Spain marked a clean energy milestone in July 2025, according to APPA Renovables' latest monthly report. Renewables generated 13,871 GWh, covering 55.1% of the national electricity mix. Solar PV ...

Renewables now account for 66% of Spain's installed power capacity. In 2024, solar PV recorded its best year

How much solar power does Spain generate

ever: it generated 44,520 GWh, representing 17% of the country's total ...
