Enhancing the strength and transmittance of ultra-thin rolled photovoltaic glass to improve glass performance and increase photoelectric conversion efficiency is the main research direction of ...

It is understood that 1.5mm is currently the thinnest photovoltaic glass that can be mass-produced.

Despite the thinness of the glass, the 1.1mm and 0.8mm ultra-thin glass is strengthened to provide high impact resistance and mechanical strength, which can withstand damage to the panel ...

Find 248 different ways to say THIN, along with antonyms, related words, and example sentences at Thesaurus .

thin adjective (FEW) having only a small number of people or a small amount of something:

It is understood that 1.5mm is currently the thinnest photovoltaic glass that can be mass-produced. Due to the excellent transparency and PID-free characteristics of double.

In particular, 1.6mm ultra-thin low-iron solar glass is now widely used in advanced PV module designs, where traditional glass solutions can no longer meet performance and structural ...

Something that is thin is much narrower than it is long. A thin cable carries the signal to a computer. James's face was thin, finely boned, and sensitive.

The MIT team has achieved the thinnest and lightest complete solar cells ever made, they say. To demonstrate just how thin and lightweight the cells are, the researchers draped a ...

The team has already created the thinnest and lightest full solar cells ever made and to prove it they placed one cell on top of a soap bubble. The researchers acknowledge that this cell ...

How thin is the thinnest solar glass

Thin describes people, or something that has a short distance through it from one side to the other. Thin is also used of things that are not as thick as you expect.

THIN definition: having relatively little extent from one surface or side to the opposite; not thick. See examples of thin used in a sentence.
