In debates about renewable energy, it is often claimed that installing solar panels on farmland renders it unusable for agriculture - taking away precious space needed for food production. This assertion has ...

Solar panel placement strategies for maximizing energy production and/or crop yield. While agrivoltaics allows for both renewable energy and agricultural production on the same plot of land, there are often ...

Agrivoltaics offer an opportunity to keep agricultural land in production while increasing the amount of renewable electricity. Yet, some opponents of agrivoltaics projects object to the aesthetic ...

If you are an agricultural land owner and are considering your options to go solar, here are some resources to help you decide what's best for you.

Some solar project leases are being designed to make it possible to grow crops between panels, while others, like Doral Renewables LLC, are allowing livestock to graze around the panels ...

General Economic & Resource Considerations
Tax Implications
Comparison of Commercial Verses
Agricultural Environmental Concerns
General Land Maintenance
Weed, Shrub & Tree Maintenance
Wildlife Impacts
Proximity to Airport
Fire Safety
Vegetative Buffer Zones
Evaluation of The Contract
Aim to evaluate the potential impact this project might have upon wildlife. Consider both the good and unfavorable potential consequences. Small shrubs or tree borders may protect the investment as well as provide an aesthetically pleasing area. However, some plants will simply not tolerate the amplified light or heat if planted too close to the so...

Solar panel placement strategies for maximizing energy production and/or crop yield. While agrivoltaics allows for both renewable energy and agricultural production on the same plot of land, there are often ...

Solar power installation on agricultural land involves setting up photovoltaic (PV) panels or solar infrastructure either alongside crop production or on underutilized sections of farmland to ...

Is it allowed to build photovoltaic panels on arable land

At first glance, it may seem counterintuitive to cover valuable arable land with solar panels. However, research has shown that the strategic placement of panels can actually enhance crop ...

New Jersey Dual-Use Solar Energy Act Directs NJ Board of Public Utilities to consult with NJ Dept. of Agriculture and Rutgers to develop a dual-use pilot program for solar projects on working farmland ...

Currently, there are several ways solar panels can be installed to complement agricultural activities. Fixed vertical or tilted panels provide partial shading for crops and vegetables, protecting ...

The decision to transfer land use from agricultural production to solar panel electrical production (solar farms) should be made by careful examination of immediate and long-term potential risks and benefits.
