In this study, peanuts (*Arachis hypogaea*) and ryegrass (*Lolium perenne*) were cultivated in photovoltaic array in the dry-hot valley of southwest China, with an off-site native land serving as...

As the photovoltaic (PV) industry continues to evolve, advancements in Rye grass can be grown under photovoltaic panels have become critical to optimizing the utilization of renewable energy sources.

And while the grass under your trampoline grows by itself, researchers like me in the field of solar photovoltaic technology -- made up of solar cells that convert sunlight directly into ...

You've probably seen those vast solar farms stretching across fields - but have you ever wondered what's happening beneath those gleaming panels? Well, it turns out the choice of turf ...

Agrivoltaics, the practice of combining solar energy production with agriculture, offers a dual opportunity to generate renewable energy and grow crops on the same land. However, ...

Thus, an agrivoltaics experiment was conducted through cultivation of peanuts (*Arachis hypogaea*) and ryegrass (*Lolium perenne*) on the land of a photovoltaic power plant in ...

Wait, no... actually, it's fantastic for both. Through what researchers call the 'microclimate effect', vegetation: 'Our pilot project achieved 19% higher energy yield compared to bare-ground ...

Benefits can include protecting the soil, improved pollinator habitat and livestock (primarily sheep) grazing performance and reduced maintenance cost for the solar operator. In observing ...
