Through the first five record-setting solar and battery months of 2025, 11.5% of California's potential solar generation was curtailed to maintain grid balance.

Community-scale projects generate during peak evening hours, replacing some thermal generation and drives up to 2% total decrease in CO2 emissions in High Community Solar and Storage Case, ...

On this page, you can explore our database of solar projects in California. Each month, we track projects in development and update our list of the largest solar projects expected to come online in California.

The California Independent System Operator (CAISO), the grid operator for most of the state, is increasingly curtailing solar- and wind-powered electricity generation as it balances supply ...

Monitor real-time grid conditions. View current and historical data for demand, net-demand, supply, renewables, CO2 emissions and wholesale energy prices.

The California Independent System Operator (CAISO) is facing a challenging but necessary task: curtailing the output of solar and wind power to ensure grid stability.

Solar and wind energy output in California was curtailed by 29% more in 2024 than the year before, with solar accounting for 93% of curtailed energy that year, the Energy Information...

Solar generation continued to increase heading into April, rising 2 GW year over year. Generation levels peaked at 21 GW in April, and made up the majority of CAISO's April fuel mix at ...

California will invest US\$9.3 billion in 46 transmission projects to accommodate the state's renewable energy shift, enabling more than 17GW of solar generation to be added to the grid.

Is there any solar power generation in Cao

This work explores the use of limestone and dolomite for energy storage in concd. solar power (CSP) plants by means of the calcium looping (CaL) process based on the multicycle ...
