This landmark 300MW battery storage site is capable of powering up to 680,000 homes with instantaneous power over two hours. Thurrock Storage can respond rapidly to changes on the ...

By building batteries in areas of high electricity demand, such as around London, Field can provide vital balancing services to the grid and make existing grid infrastructure more efficient.

National Grid reinforced its Tilbury substation to ensure the network in the region could safely carry the battery's significant additional load, with new protection and control systems installed ...

The substation sits beside the former site of Tilbury A and B coal-fired power stations, now demolished, and the battery's connection has been framed by industry figures as a tangible ...

The project is on National Grid land adjacent to its 275kV Warley substation. It will connect directly to the London electricity distribution circuit and serve to balance supply and demand in London.

We've successfully connected the UK's largest battery energy storage system (BESS) to our transmission network.

The site is expected to play a key role in balancing supply and demand across London and the South-East, providing rapid-response services to National Grid. The connection was ...

From overcoming grid constraints for rapid EV charging to deploying intelligent battery storage, our integrated solutions are designed to deliver reliable, sustainable and profitable energy ...

Statera says that equates to instantaneous power for up to 680,000 homes for two hours. The battery storage facility is located immediately north of the former Tilbury coal power station, with ...

London Grid Battery Energy Storage Station

Located near London and immediately north of the former Tilbury coal-fired power station, the project has now begun delivering electricity to the national grid.
