The study aims to reveal the prominent strategic energy alternatives for Northern Cyprus (NC) in its aspiration to transition from fossil fuels to solar energy/clean ...

Liquid air energy storage (LAES) is a grid-scale energy storage technology that utilizes an air liquefaction process to store energy with the potential to solve the limitations of pumped-hydro and ...

Discover how the innovative energy storage project in Northern Cyprus addresses renewable energy challenges while creating new opportunities for regional growth. Learn about cutting-edge solutions, ...

On January 26, 2026, the Frederick Research Center, one of the leading research institutions in Cyprus specialising in areas such as materials science and sustainable engineering, ...

This paper reports sizing of a photovoltaic (PV) power plant with storage system for Middle East Technical University Northern Cyprus Campus through technical and economic analyses.

That's Northern Cyprus today - a region with untapped renewable energy potential but limited grid flexibility. Recent studies show that solar irradiance levels here exceed 1,800 kWh/m²; annually, ...

For years, Northern Cyprus has danced this frustrating tango with unreliable energy grids. But here's the twist: The region is now leading a power storage revolution that's turning ...

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021.

With solar irradiation levels hitting 1,750 kWh/m²; annually sunlight intensity that rivals California's Central Valley, Northern Cyprus should be leading Mediterranean renewable adoption.

Northern cyprus energy storage research and development

This study aimed to examine the current energy sector in NC and identify strategic energy alternatives based on sustainable energy planning in the transition from fossil energy to renewable energy.
