Statnett are obligated to connect everyone who wants to use or produce electricity to the grid, but it must be clarified whether there is available capacity in the grid and whether the connection entails grid ...

Such connections can help to balance out supply and demand across regions, which will be increasingly important as variable renewables like solar and wind make up a larger share of electricity generation.

OverviewExport/ImportProduction and consumptionTransmissionPriceMode of productionSee alsoFurther readingNorway has imported up to 10% of its electricity production during 2004-2009. According to IEA, in 2015, Norway exports about 15% of its electricity generation and imports about 5%, and the net electricity export was 14.645 TWh. In 2021, exports were 24.7 TWh and imports 7.6 TWh, mostly from Sweden. Norway and Sweden's grids have long been connected across the 1630 km long border. A 1 GW 420 kV high-voltage link between Nea River station in Norway and Järpen (Järpen station at Indalsälven ri...

New connections to other countries could stabilize available power levels and reduce price swings, however as these areas are more expensive, average price may rise in Norway.

Norway is a power surplus country, meaning that in a normal year Norway exports power to its neighbouring countries. Norway's international electricity interconnectors consist of a total of 17 ...

The process of connecting to the power grid is made up of several steps, from submitting a grid connection request to signing a connection agreement and getting everything else into place to start ...

A well-developed electricity grid makes it possible to transmit power from the hydropower plants in the southwest and north to consumers in other parts of Norway and abroad.

Integration with other countries' power systems, the well-developed power grid and the characteristics of

Norway power station power generation connection

hydropower production make Norway's power supply system very flexible, reducing ...

In Norway, Statnett has the task of coordinating production and consumption of electrical power so that there is always a balance in the power system.

In 2016 alone, Norway commissioned 35 new hydropower stations. Totalling 154MW of capacity, these are all small projects. Norway is also working on building interconnectors with the UK ...

As of 2021, Norway registered about 1338 small-scale hydropower plants up to 10 MW with a total installed capacity of 2924 MW, generating roughly 10.4 TWh per year.
