This page presents Papua New Guinea's climate context for the current climatology, 1991-2020 and historical record from 1950-2023. Data is derived from ERA5 reanalysis products.

Projections suggest warming in Papua New Guinea (PNG) could be similar to, or very slightly below, the global average. Warming of around 3.6°C is projected by the 2090s, compared to the 1986-2005 ...

Welcome to the Climate Change and Development Authority (CCDA) of Papua New Guinea. Our mission is to spearhead the nation's response to the growing challenges of climate change while ...

Papua New Guinea is highly vulnerable to climate change. Much of the country is already at high risk of natural disasters, and changes in the climate are expected to exacerbate disasters such as floods, heat waves, and landslides. Warming temperatures are expected to reduce crop yields, which would negatively impact the large proportion of the population that relies on subsistence agriculture. Sea level rise may ...

As an island surrounded by the vast Pacific Ocean and the adjacent large land masses of Australia and Asia, the climate and weather pattern of ...

This page offers three themes in which to explore and understand differences in variability, trends, and significance of change across the last 70-, 50- and 30-year periods.

The story of Papua New Guinea serves as a microcosm of the challenges and opportunities facing the world at COP29. It highlights the urgent ...
