With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase. The Inflation Reduction Act (IRA) has also accelerated the development of energy storage ...

Each quarter, NREL conducts a presentation of technical trends within the solar industry.

Solar energy's unstoppable ascendancy, largely caused by costs continuing to fall and deployment accelerating, is no longer a matter of if--it is a matter of how fast. The global energy...

This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest capacity installation in a single year since 2002. Together, solar and battery ...

Let's face it - energy storage just became the rock star of the renewable energy world. With recent reports showing energy storage orders increased 8 times year-over-year [1], even your ...

The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

PV system costs increased in Q2 2025 following the Trump administration's implementation of 10% baseline tariffs in April 2025. While a 90-day pause on reciprocal tariffs was ...

A recent spate of fires involving battery energy storage facilities may increase scrutiny from lawmakers and regulators on battery energy storage facilities and this may increase the time ...

The United States installed approximately 26.0 GWh (8.8 GWac) of energy storage onto the electric grid in 2023, +34% (+30%) y/y, as a result of high levels of residential deployment and grid-scale ...

Solar and storage, combined, accounted for 85% of new capacity in this timeframe. The US added 4.7 GW of

Photovoltaic energy storage orders increased 8 times

solar module manufacturing capacity in Q3, bringing the total to 60.1 GW. ...
