---

It's assembled with bolt and nut together, and fixed with rails to firmly clamp panels from wind and any other shaking. The mid clamp solar mounting components are made of high quality anodized ...

Recognized for its high load-bearing capacity, exceptional stability, and installation flexibility, this product is an ideal choice for large-scale solar power plants, commercial & industrial distributed PV projects, ...

The products are made of aluminum alloy and the surface is anodized. They can be used for 30, 35, 40, 45 and other types of photovoltaic panels. The middle distance of the briquettes is 14-22mm, which ...

Aluminum alloy photovoltaic brackets come with a full set of accessories, and the quantity can meet your installation needs. Easy to install, light weight and easy to transport.

Good Compatibility: The size and shape of mid and edge pressure blocks are generally designed and customized to fit different specifications of photovoltaic panels, ensuring a perfect ...

It plays the role of installing and fixing panels in solar photovoltaic systems. Solar photovoltaic compacts are divided into "medium pressure blocks" and "edge clamps" and film compacts.

Each block measures 4x8x16, weighs in at approximately 32lbs, and meets both ASTM C90 structural masonry and ASTM C1884 for concrete ballast block specifications.

One such photovoltaic block consists of four parts and is compact; clamped with screw-knobs, the solar panel can be quickly and safely mounted anywhere on any solid surface, such as an exterior wall or ...
