Poland's energy sector is entering a period of major turbulence. The immediate question is the continued operation of the Turów power station since the EU Court of Justice recently ordered ...

Poland's biggest power utility PGE (PGE.WA), opens new tab plans to end production of electricity in the four remaining coal-fired units at its Rybnik power plant by the end of 2025, Polish ...

WARSAW, Jan 11 (Reuters) - Poland must eliminate coal from power generation by 2035 as producing electricity from the fuel will not be economically viable, endangering energy security,...

Poland's coal dependence has propelled the country at the forefront of European Union efforts to decarbonise energy production, the largest source of emissions. With climate change now a ...

Although the Polish energy sector is still predominantly coal-based, the transition away from this reliance is becoming a reality. While Poland is now on track to pour the first concrete for its ...

Poland urgently needs to build new gas-fueled power stations and keep its coal-fired units going for longer to avoid energy supply shortages this decade, according to the country's grid...

Among the goals is setting an aspirational date for the transition away from coal-fired power generation in Poland. Historically, this has always been a difficult issue, fraught with a number ...

Poland's nuclear program is delayed and risky. Renewables are scaling faster, cheaper, and with fewer risks.

You know, Poland's energy landscape is sort of at a tipping point. With coal still generating 70% of electricity in 2023, the government's push for 50% renewables by 2040 creates a storage capacity ...
