What is solar powered lighting?

The concept of solar powered lighting is simple: convert sunlight into electricity and store it for later use. A solar lamp does just that. It's a fantastic way to create homemade solar lamp solutions for your garden, patio, or even as an emergency light source.

How do you wire a solar lamp?

If you're using a glass jar with a lid, you can drill holes in the lid for the solar panel wires and potentially a switch. The LED can be mounted inside the lid or suspended within the jar. This is a critical step in your solar lamp assembly. Correct wiring ensures efficient charging.

How do I install a solar light switch?

If you're including a manual switch for your solar lamp: Placement: Mount the switch in a convenient location on your enclosure. Wiring: Wire the switch in series with the positive wire going to the LED. This allows you to interrupt the power flow to the light.

How do I install a solar panel?

The solar panel usually needs to be mounted externally, exposed to sunlight. The battery, charge controller (if used), and LED can be placed inside the enclosure. The solar panel wires to enter the enclosure. Any switches or indicator lights you might want. Mounting the LED light source. Example: Using a Glass Jar
