This article explores a new process for extracting valuable antimony from the glass of solar panels, aimed at solving disposal challenges in the 2030s.

Recycling broken PV glass (cullet) offers a partially sustainable solution by reducing dependence on virgin Sb and extending the lifespan of existing reserves.

These glasses, predominantly manufactured in China, are doped with antimony oxide (Sb_2O_3) to ensure high transparency while keeping production costs low.

In solar glass specifically, small amounts of antimony oxide help stabilize optical properties under years of UV exposure, reducing "solarization" (the tendency of glass to brown or ...

While float glass is most common in solar panels, patterned glass also contains antimony, a compound that improves solar glass efficiency but raises environmental and health concerns on the backend.

Solar glass can be either low-iron patterned glass or low-iron float glass. Both can be recycled if the quality is acceptable, but this depends on the glass composition and the end product to be produced.

Cleaner Chemistry, Clearer Glass - Homerun's ultra-pure Brazilian silica enables 100% antimony-free solar glass production - a first for the Americas...

Borosil has developed NoSbEra: World's first Antimony-free solar glass. The world is staring at a burning issue of the most hazardous substance "Antimony" present in solar glass.

Budget 2026 removes customs duty on sodium antimonate, a key input for solar glass. The move is expected to support PV glass makers by easing costs, improving margins and strengthening ...

The application of antimony as a clarifying agent in solar photovoltaic glass will become the main driving

Solar antimony glass

force for demand growth in the next decade.
