Solar power is energy from the sun that is converted into thermal or electrical energy. Solar energy is the cleanest and most abundant renewable energy source available, and the U.S. has some of the ...

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

People have used the sun's rays (solar radiation) for thousands of years for warmth and to dry meat, fruit, and grains. Over time, people developed technologies to collect solar energy for heat and to ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Last week, more than 100 solar companies penned a letter to Congressional leaders urging them to revoke the Interior Department policy, which they said amounted to a near ...

At least 35 commercial-scale solar power projects that were under at least preliminary review by BLM when President Donald Trump took office still await action.

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.

Discover why rising electricity prices make solar a great investment in 2026, even after the 30% federal tax credit expires. We break down the long-term savings.

Solar panels work through the photovoltaic (PV) effect. When sunlight hits the panels, it creates an electric current that is first used to power electrical systems in your home.

The Trump administration's cancellation of the largest solar project in the United States has sparked confusion

Solar power generation is suspended

and concern among Republicans and Democrats alike.

Since President Trump took office, almost \$19 billion worth of wind and solar power generation projects have been canceled, according to U.S. consultancy Atlas Public Policy.

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what solar ...
