Solar power remains its leading position in capacity additions, with 79.2 GW installed from January to May, making up 68% of the total new capacity. This represents a 29% year-on-year increase, ...

Stretching 133 kilometers long and 25 kilometers wide, this solar installation along the Yellow River in northern China will provide an estimated 180 billion kWh of energy by 2030.

In the first half of this year, China built more solar than the rest of the world combined. Seventy-four percent of all large-scale wind and solar projects are being built in China.

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

For the first time, wind and solar are beginning to displace coal power in China, causing emissions to drop. Analyst Lauri Myllyvirta explores the challenges ahead for policymakers, who ...

With installations surging across major markets and China driving the charge, 2025 is on track to be another record-breaking year for solar power.

China is using the high-altitude expanse for immense solar panel farms and wind turbines and has begun work on the world's largest hydroelectric dams.

Hundreds of rows of gleaming panels blanket swathes of scrubby sand at sunset in a remote northern Chinese desert -- once the biggest solar farm in the world.

China's surge in renewables and whole-economy electrification is rapidly reshaping energy choices for the rest of the world, creating the conditions for a decline in global fossil fuel use. Clean generation ...

Solar power generation is the first choice for Yuecan

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn
