The future of U.S. space exploration and NASA-funded science is up in the air as President-elect Donald Trump prepares to return to office. "There's just so many question marks," ...

Humankind accomplished new feats in space this year, including scooping up some of the moon's farside and launching a probe to Jupiter's moon Europa.

The China Academy of Space Technology is spearheading this geostationary solar power station and with a 2028-2050 roadmap, Beijing is set to redefine the global energy game.

Hubble is still going strong 35 years after it was launched into space. Celebrate its anniversary with some out-of-this-world images.

Here are the best space pictures ever, from Hubble, the James Webb Space Telescope and more.

China gears up to develop solar power stations in space that can transfer the sun's energy in the orbit back to the ground on Earth. It draws from the idea of space-based solar power.

China is currently planning to build a gigantic solar power station in space. To get parts of the array out of our atmosphere, scientists are working on a reusable heavy lift rocket called the...

In a bold move that could redefine the future of renewable energy, China has announced plans to construct a colossal solar power station in space, capable of generating energy equivalent to ...

Funding uncertainties are pushing U.S. space scientists out of the field and putting existing and future space missions on the chopping block.

China is pushing the boundaries of renewable energy with its ambitious plan to build kilometer-wide space solar stations that will beam energy directly to Earth.

China is currently planning to build a gigantic solar power station ...

In a bold move that blends innovation, sustainability, and space technology, China is launching the world's first solar power plant into space.
