MOIT forecasted that localized power shortages in the manufacturing hub of Ho Chi Minh City is expected that by 2030 it will lack more than 10,000 megawatts (MW) or 7.5 % of total capacity.

Q: How does this compare to Singapore's energy storage projects? A: While smaller in scale, Vietnam's project emphasizes tropical climate adaptability and rapid deployment.

Among the key objectives were the upgrade of the power transmission and distribution system, acceleration of the roadmap to build a smart power system, and development of an energy storage ...

"By 2025, HCMC aims to source 20% of its energy from renewables - storage systems are the missing link in this transition," says a Vietnam Electricity (EVN) spokesperson.

The effectiveness of the Microgrid Control solution helps to solve the problem of a safe and stable supply and storage system; as well as bring long-term values in terms of costs, reducing emissions, helping ...

To advance this goal, Vietnam Electricity (EVN) is considering assigning its five power corporations to deploy around 1,200 MW of BESS. Recent policy instruments have established ...

As Vietnam deepens its energy transition, pumped hydro storage (PHS) stands out as a proven, cost-effective, and long-lifetime solution to firm variable renewable energy and enhance grid ...

Energy storage power stations address Ho Chi Minh City's urgent needs for grid stability, renewable integration, and disaster resilience. As Vietnam accelerates its energy transition, storage systems will ...

From stabilizing Vietnam's renewable transition to ensuring business continuity during outages, energy storage equipment in Ho Chi Minh City plays multiple crucial roles.
