Back in 2020, Tesla announced that it was looking to remove cobalt from its batteries to create a better and cheaper electric vehicle.

Tesla confirmed that nearly half of all its vehicles produced last quarter are already using cobalt-free iron-phosphate (LFP) batteries. The information also gives us an interesting insight...

Tesla has been planning a strategy with batteries free of "complicated" raw materials, such as nickel or cobalt, for years now. In that sense, almost half of all new cars already have LFP...

Tesla commits to 100% battery recycling, sending zero batteries to landfills. The company recovers lithium, nickel, cobalt, manganese, and other materials through proprietary closed-loop ...

Discover the future of Tesla batteries in this article exploring the possibility of cobalt-free technology. Uncover insights on research, supply chain transparency, battery recycling, regulatory ...

Yes, Tesla has developed cobalt-free battery technologies, particularly in their newer models. This shift aims to reduce reliance on cobalt and improve sustainability in battery production. ...

Engineers have successfully tested a cobalt-free lithium-ion battery that performs just as well as traditional batteries.

Automakers like Tesla are transitioning to cobalt-free batteries to address ethical concerns tied to cobalt mining (e.g., child labor) and reduce environmental harm.

The Solvent-Free Revolution Tesla's dry process, largely evolved from the technology acquired from Maxwell Technologies, eliminates the liquid entirely. Direct Application: The active ...

Notably, since 2020, Tesla has been working to eliminate cobalt from its batteries due to the material's
