In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

Europe can partly credit its solar success to overwhelming public support for renewable energy sources, especially when they offer visible economic benefits. The European Commission ...

Researchers say event described as "major tipping point" for clean energy in era of destabilised politics Wind and solar overtook fossil fuels in the European Union's power generation ...

Concentrated solar power (CSP) utilises mirrors to focus sunlight and generate steam for electricity production. Each technology plays a crucial role in reducing dependence on fossil fuels ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

This article explores the various facets of solar power's growth in Europe, examining its technologies, environmental benefits, affordability, and its contribution to enhancing energy resilience ...

EU Solar Output Tops 340 TWh in 2025, Lifting Renewables to Nearly Half of Power Mix Renewables accounted for close to half of electricity generation in the European Union (EU) in 2025, ...

OverviewEU solar energy strategyPhotovoltaic solar powerConcentrated solar powerSolar thermalOrganisationsSee alsoSolar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). In 2010, the EUR2.6 billion European solar heating sectors consisted of small and

The role of solar power generation in Europe

medium-sized businesses, generated 17.3 terawatt-hours (TWh) of energy, employed 33,500 workers, and created one new job for every 80 kW of added capacity.

Solar in the European Union has been traditionally dominated by rooftop applications, and the energy crisis has further pushed the market in that direction.

With the EU's commitment to achieving climate neutrality by 2050, solar energy is expected to provide a significant portion of the Union's renewable power. The EU has set ambitious ...
