Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.

Solar power generates electricity by using either solar thermal systems that convert sunlight into heat to produce steam that drives a generator, or photovoltaic systems, which transform ...

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

Instead of converting sunlight directly into electricity, as photovoltaics does, solar thermal harnesses the sun's energy to heat a fluid called a heat carrier and then uses that heat to generate electricity or ...

Throughout the course of a day, solar energy is part of the process of thermal convection, or the movement of heat from a warmer space to a cooler one. When the sun rises, it begins to warm ...

Solar power generates electricity by using either solar thermal systems that convert sunlight into heat to produce steam that drives a generator, ...

Solar thermal-electric power systems collect and concentrate sunlight to produce the high temperatures needed to generate electricity. All solar thermal power systems have solar energy ...

On this page, we focus on the heat or thermal energy from the Sun. Watch the animated video below to learn how the Sun's thermal energy can be used to generate electricity or heat homes.

Solar thermal power generation is a technology that harnesses the sun's energy to produce electricity. Unlike photovoltaic (PV) systems, which convert sunlight directly into electricity, ...

Thermal light sources can generate electricity from solar energy

This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating ...

Solar energy is radiant energy from the sun--a fully renewable energy resource. We use the solar resource to provide daylight, electricity, and heat in four ways (in order of prevalence):
