What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device that ensures your electronics stay powered during power failures. Unlike a backup generator, a UPS offers immediate, seamless power transition, so your devices won't experience interruptions, even for a second. Primary Purpose: To provide backup power when the main power source fails.

What are uninterruptible power supply standards?

Uninterruptible power supply standards are established technical frameworks that define the minimum acceptable levels of safety, functionality, and efficiency for UPS systems. These standards are not arbitrary; they are the result of decades of research, development, and practical field data gathered by industry experts, scientists, and engineers.
