Min means Minimum. So yes, it's a function that, taken two elements, gives you the minimum of those.

As tall as they are, most wind turbines still don't escape the surface layer. The turbines would need to be between 200 to 300 meters in height to reach winds that are relatively undisturbed ...

The best height for a wind turbine is basically as tall as you can get permission for, from your local authorities. The taller the wind turbine, the higher the wind speeds are, and the longer its blades can ...

In the case of projective plane or Klein bottle, I have no idea. In short, I want to know the minimum numbers of triangles for triangulations of well-known surfaces (torus, projective plane, and ...

The guideline for wind turbine height suggests a minimum of 10 meters (30 feet) plus the blade length above the tallest nearby obstacle (like trees or houses) within a 500-foot radius, with a ...

Wind speed and direction vary depending on where you live, so it's important to select a height that captures the most wind. Taller turbines can shake stronger winds, but they can also be ...

We can search $[a, b]$ instead of all of $[a, ?]$ But we also know the extreme value theorem which says that every continuous function on a closed domain reaches a maximum ...

What is the difference between the minimum value and the lower bound of a function? To me, it seems that they are the same.

I'm searching for some symbol representing minimum that is commonly used in math equations.

As a general rule, your wind turbine should be at least 1.25 times its total height away from property lines, roads, and other structures. This guarantees that if the turbine were to fall, it ...

What is the minimum height of a wind turbine

Minimum number of directed edges to contain every Hamiltonian cycle or its inverse [closed] Ask Question
Asked 18 days ago Modified 18 days ago

Wind Tower Height: As a general rule, small wind turbines should be located so that the lowest part of the rotor is a minimum height of 10 m (30 ft) above an obstacle within a 100 to 150 m (300 to 500 ft) ...
