The working principle of solar panels is to use the photoelectric effect, also known as the photovoltaic effect. Photovoltaic effect refers to the phenomenon that an object generates ...

principle of a solar panel is based on the photoelectric effect. The photoelectric effect was first discovered by Albert Einstein in 1905 and explains how light can be used to create an electric current.

**Working Principle:** The solar cell working principle involves converting light energy into electrical energy by separating light-induced charge carriers within a semiconductor.

A solar panel is composed of multiple interconnected solar cells. When sunlight hits these cells, the photovoltaic effect generates a direct current (DC) electrical flow.
