The best solar generators are quiet, green solutions to powering up during power outages. See our top picks after extensive testing.

Today, most panels are at least 20% efficient, but the best ones convert over 22% of the sun's energy into electricity. After reviewing hundreds of solar panel models, we found five brands ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

While there is not a universal solar energy solution, in this guide you will find some resources that can help you decide what's best for you. Consider these questions before you go solar: Is Solar for Me? ...

The largest fuel source for this capacity is natural gas (42.7%), followed by coal (15%). Wind, nuclear, solar, and hydro together account for more than one-third of capacity. Solar continues to be the main ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

They typically cost about \$2,000 or more and generate enough electricity to power a refrigerator, electronics and lights, potentially shaving several hundred dollars a year from utility bills.

The U.S. Energy Information Administration predicts solar energy will be the leading force behind this year's growth in the electric power industry.

Discover the best renewable energy source for your needs. Compare solar, wind, hydro & more with 2025 data, costs, and expert analysis.

What solar energy is best for generating electricity this year

Montserratt Montserratt California leads as the top solar state. With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the fastest growing solar economy with the largest ...
