#444; opacity:.2; }wikipedia Photovoltaics - WikipediaOverviewEtymologyHistorySolar cellsPerformance  
and degradationManufacturing of PV systemsEconomicsGrowthPhotovoltaics (PV) is the conversion of light  
into electricity using semiconducting materials that exhibit the photovoltaic effect, a phenomenon studied in  
physics, photochemistry, and electrochemistry. The photovoltaic effect is commercially used for electricity  
generation and as photosensors. A photovoltaic system employs solar modules, each comprising a number of  
solar cells, ...

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity ...

If the semiconductor's bandgap matches the wavelengths of light shining on the PV cell, then that cell can efficiently make use of all the available energy. Learn more below about the most commonly ...

It converts the direct current (DC) electricity generated by the solar panels into alternating current (AC) electricity, which is used by most household and industrial appliances.

Solar panels are used to collect solar energy from the sun and convert it into electricity. The typical solar panel is composed of individual solar cells, each of which is made from layers of silicon, boron and ...

Are you struggling to pick the right solar panel technology for your utility-scale project? You're not alone. The stakes are high--wrong choices can lead to wasted money and lost energy. At ...
