-----

Wind turbine blades can take a beating, operating 24/7 in the harshest of environments. If blades are damaged the repair process can be costly, tedious, and even dangerous for the technicians involved.

Wind Energy Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves using wind turbines to convert the turning ...

The post-molding operations to manufacture wind turbine blades require workers to perch on scaffolding and wear protective suits including respiratory gear. Automation, the researchers ...

The rapid expansion of wind farms has led to a growing challenge: the escalating accumulation of decommissioned wind turbine blades in landfills.

The group broke into an area where workers are felling trees to make way for 550ft wind turbines in the rolling Mugello hills near Vicchio, the birthplace of the artist Giotto.

Why Do Wind Turbine Blades Move in the Wind? There are two important reasons why wind turbine blades are able to spin in the wind: Newton's Third Law and the Bernoulli Effect.

Researchers at the National Renewable Energy Laboratory (NREL) of the US Department of Energy use robots to produce wind turbine blades. NREL aims to reduce labor ...

As technology continues to advance, we can expect even more efficient and innovative blade designs in the future. And as we move towards a cleaner, more sustainable energy future, wind turbines--and ...

When it comes to Wind Energy Industry Technician knives look no further than GME Supply. We source the best quality knives so you can get the job done efficiently and safe. Our knife selection includes ...

The U.S. Department of Energy's National Renewable Energy Laboratory (NREL) has employed robots to
